SUMMARY

Applied AI Engineer with 3+ years of experience in Python-driven automation and intelligent system design. Specialized in building production-grade RAG pipelines, FastAPI services, and multi-agent LLM architectures that solve complex business problems. Proven track record of operationalizing AI features through robust CI/CD and observability frameworks to drive scalable internal tooling for Fintech and Real Estate Technology sectors.

PROJECTS

agentpipe: Agentic Coding Pipeline (Open Source)

Open-source coding agent that takes a written ticket, generates code, proves it with tests, and opens a pull request. Built a metered LLM client that records every call's cost as OpenTelemetry spans with content-hash caching, a LangGraph loop with crash-safe resume and a three-state acceptance gate, a reviewer and worst-first fixer with per-role model routing, and an LLM judge as an eval gate with a labelled dataset measuring its false-pass and false-block rates. 237 tests run against Postgres in CI on every push; proven against real third-party repositories (boltons, toolz, funcy) on live issues.

Technologies: Python, LangGraph, PostgreSQL, OpenTelemetry, OpenAI, pytest, GitHub Actions

CoachOS V5: Coaching Practice Management System

Production n8n system handling enquiry capture, DocuSeal contract delivery, Paystack payments, Fireflies session notes, Airtable CRM, and Slack alerting, a complete ops stack replacing manual coordination across five separate tools. AI-generated session reports and community drip onboarding reduced post-session admin to zero; live app deployed on Google Cloud Run.

Technologies: n8n, Supabase, Gemini, React, GCP

PropVid: AI Real Estate Listing Video Pipeline

LangGraph multi-agent architecture: a vision agent analyses property photos, a writing agent crafts the sales script, ElevenLabs generates voiceover, and Creatomate renders the final video, full pipeline in under 10 minutes. Deployed as a Flask service on Google Cloud Run; the YouTube Data API publishes the listing video automatically with zero manual steps.

Technologies: LangGraph, Python, Gemini 2.5 Flash, ElevenLabs, Creatomate, GCP

AI Brand Agent: Creative Strategist

Multi-channel brand agent answering enquiries across a website chat widget and email from the client's own Pinecone knowledge base. A document-ingestion pipeline validates, extracts, embeds with Gemini, and upserts client documents; every lead is captured to a Supabase CRM on intent, conversations are logged, and unclear cases escalate to the human. Inbound emails are classified and auto-replied or escalated, with proposal follow-up triggered on lead capture.

Technologies: n8n, Pinecone, Supabase, Gemini

Business Intelligence Automation: Coaching Firm

Built a system that captures every client interaction from Google Meet, Gmail, and WhatsApp; an AI agent matches each interaction to the right client and generates a structured intelligence report every Monday. Saved 15 hours per week, verified by the client.

Technologies: n8n, OpenAI API, Google APIs

WORK EXPERIENCE

Applied AI Engineer

Independent Practice, Remote | June 2023 to Present

- Design and maintain scalable n8n-based automation systems for Real Estate Technology and Fintech clients, replacing manual CRM logging and payment processing with robust API integrations.
- Build sophisticated agentic systems using LangGraph and the OpenAI Agents SDK, focusing on multi-agent pipelines with structured outputs and human-in-the-loop patterns for mission-critical tasks.
- Maintain RAG pipelines integrating Pinecone and Supabase pgvector to connect LLM APIs with internal knowledge bases, ensuring high-accuracy retrieval through automated ingestion workflows.

- Evaluate model performance and implement system-wide observability with OpenTelemetry, capturing span-level data across LLM calls to monitor cost, latency, and reliability in production.
- Prototype scalable tooling and reusable AI components using FastAPI and CI/CD pipelines, using AI-native environments like Claude Code and Cursor to accelerate development cycles.

Software Developer

UB4US Smart Solutions, Lagos | February 2021 to May 2023

- Designed RESTful APIs using Django REST Framework for cloud-based media platforms, optimizing system design to reduce backend response times by 40%.
- Built internal automation workflows using Python, Google Workspace, and Slack, reducing manual administrative operations by approximately 10 hours per week.
- Maintained custom Python tooling and WordPress integrations, leveraging Flask-based microservices to improve site performance and user engagement by 25%.
- Led a team of 4 engineers through the software development lifecycle, ensuring adherence to CI/CD standards and modern backend architectural best practices.

EDUCATION

B.A. in Philosophy

Obafemi Awolowo University | January 2020

ADDITIONAL SKILLS

AI & Machine Learning: Python, LLM APIs, RAG Architecture, LangGraph, LangChain, Model Evaluation, Prompt Engineering, Vector Embeddings, Semantic Search, Structured Outputs, CrewAI, Autogen

Backend & System Design: FastAPI, Django, Flask, REST APIs, Async Python, System Design, PostgreSQL, MySQL, Redis, Celery

Automation & DevOps: n8n, CI/CD, Observability, OpenTelemetry, Docker, Google Cloud Run, Git, Webhook Orchestration, Coolify

Tools & Platforms: Pinecone, Supabase pgvector, Claude Code, Cursor, OpenAI Agents SDK, Gemini, Vapi, Airtable, Slack, Google Workspace
